

# Custom SSL Management Service

## Pricing + parameters for custom SSL management services

For customers that elect to add a custom SSL certificate to their YourMembership.com site or member community, YourMembership.com offers the optional Custom SSL Management Service.

### YourMembership.com Free SSL Certificate

When you launch your site, it is secure via the YourMembership.com SSL certificate. To keep the YourMembership.com product cost-effective, we do not require customers to purchase custom SSL certificates in order to protect their data. All YourMembership.com customers utilize YourMembership.com's wildcard certificate, which allows their sites to be SSL-enabled as long as they adhere to the <https://<customer>.site-ym.com> naming convention. By default YourMembership.com currently secures the following under the <https://<customer>.site-ym.com/> format:

- Store Checkout
- Dues Payments
- Donation Page
- Entire Administrative Backend
- Login
- Event Pages and Registration
- Changing Password/Username
- Password Challenge
- Profile Editing
- Updating Preferences
- List is Subject to Change

YourMembership.com utilizes GoDaddy, as it currently ranks as one of the highest-rated certificate authorities. GoDaddy also remains cost-effective – which allows YourMembership.com to maintain its industry-competitive pricing.

### Custom SSL Certificate

If a customer chooses to utilize a custom SSL certificate, YourMembership.com provides the following Custom SSL Certificate Management Service at the following price:

- Setup/Renewal fee: \$250 (occurs on the first year of the three-year term)
- Annual fee: \$500 per year for a three-year term

By implementing a custom SSL certificate, customer sites and member communities are SSL-enabled using their own top-level URLs in SSL mode ([www.<customer>.com](http://www.<customer>.com)). The custom SSL option is bit more seamless and may provide some enhanced URL branding – as users will see only the customer's top-level domain vs. seeing [<customer>.site-ym.com](http://<customer>.site-ym.com). NOTE: users on a YourMembership.com SSL-enabled site do NOT have to manually navigate to a different URL; they may simply notice a different URL ([<customer>.site-ym.com](http://<customer>.site-ym.com)) in their browser as they perform certain transactions.

In addition to pages secured for free via the YourMembership.com SSL certificate, custom SSL-enabled sites also will have SSL pages on:

- Registration Process
- Profile Editing
- Profile Viewing
- Resume Management
- Mobile Mini Site
- Custom Forms
- Various Profile Management Pages
  - Updating Preferences
  - Dues Status
  - and more
- List is Subject to Change

NOTE: YourMembership.com will not support custom SSL certificates should the system be transferred to the company's alternate/redundant network, which is done temporarily in case of emergency or emergency testing. Should YourMembership.com temporarily switch to its alternate/redundant network, all customer sites will remain SSL-enabled via the free YourMembership.com SSL certificate.
